

MSAT^e

The MSATe Mobile Satellite Radio

KEY FEATURES

- All new rugged Handset and Transceiver Unit
- Purpose built for PTT
- Extends the reach of Land Mobile Networks across North America using the Ligado SkyTerra 1 Satellite
- Highly reliable and simple to use
- Unlimited PTT Talk Time
- Works seamlessly with the MSAT-G2 and all MSAT talkgroups and services
- Traditional Telephony, with GETS (Government Emergency Telecommunications System) compatible local phone number assignments
- Supports all MSAT Tracking services

The Ligado MSATe Mobile Satellite Radio works where you do, extending the reach of existing networks by easily integrating with land mobile radio (LMR) networks.

Based on terrestrial radio standards, this powerful and flexible communications tool provides a cost-effective alternative to new deployments in remote or temporary locations. Dual mode operation allows traditional telephony service to operate in tandem with Push-To-Talk (PTT) service, so customers never miss a call.

Talkgroups

The MSATe Mobile Satellite Radio is fully interoperable with all MSAT talkgroups and services, including our Ligado SMART™ program talkgroups for public safety interoperability. Available in fixed, mobile, and maritime configurations, it provides customers, including utilities, public safety entities, commercial transportation providers, fisheries and off-road racers, PTT service when

land based networks are damaged, congested or simply don't exist. MSAT talkgroups efficiently and affordably connect up to 10,000 radios per group anywhere in North America. Talk to a group, or connect 1-1 on a private PTT call, simply quickly and reliably.
